Successful Sugar Beet Storage

Proper ventilation during storage **WILL** reduce the amount of sucrose loss

ventilation towers on a sugarbeet pile

ventilation tower with controls

Controlling storage losses through the use of forced-air ventilation will minimize sucrose loss and increase your bottom line.

Techmark has been designing and installing ventilation systems for over 20 years. Our experience and commitment to excellence ensure value is created for our customers. A well designed and operated sugar beet storage ventilation system will reduce sucrose losses and increase returns. We'll work together with you to understand your operation and where opportunities exist to create value and quality improvement. Techmark is a leader in the storage ventilation industry and has a well deserved reputation for integrity and excellence.

***We would be glad to speak with you about your current operations and what opportunities may exist.
Our engineers can be reached at 517-322-0250***

Through innovative design and installation, Techmark will work with you to increase quality and profit.
